

# Anonymous article review

Title \_\_\_\_\_

*(the reviewer transfers, if necessary, the "V" symbol from the fourth to the second or third column of the table)*

<b>Analysis of the article</b>	No	Partially	Yes
The name corresponds to the content of the work, quite detailed. The title of the article will be of interest to an international scientific audience and does not need an adjustment			V
Annotations correspond to the formal requirements of the journal (the volume of 1800-2500 characters, structure, style, lack of common phrases, etc.), are written competently, reveal the main results of the work			V
Keywords (3-6 phrases) are not duplicated in the title, they correspond to the content of the work			V
Introduction allows to assess the current state of the problem at the global level (contains at least 15 references to periodical scientific publications published in the last 5-10 years)			V
The purpose of the work is formed correctly, corresponds to the content and title			V
The "Material and methods" of the work are written correctly, let you see that the study eliminated all possible sources of errors			V
The repeatability of the studies is sufficient, the volume of samples corresponds to similar studies published in international scientific publications			V
The data are processed by correct statistical methods			V
Each figure of the article is self-sufficient (for its understanding, you do not need to refer to the section "Material and methods" or read the title of the article)			V
Diagrams are correctly formed (axes are signed, units of measurements are indicated in the SI system, the font does not visually differ from the font of the article text)			V
The diagrams placed in the manuscript make it possible to edit them			V
The article contains the optimal amount of graphic material for this type of research			V
The tables are correctly written (presented processed, not primary data; the reliability of sample differences is estimated; the repetition of experiments is indicated; the notes to the tables give all the data necessary to understand the contents of the table without referring to the "Material and methods" section)			V
"Discussion" of results contains references to similar work, allows you to compare the results with the already available data			V
"Conclusions" are concise, concrete, consistent with the purpose and title of the article, not literally duplicated in English, Russian or Ukrainian or annotations			V
The text of the work does not contain any spelling and grammatical errors, misprints. The article is written competently			V
"References" are not oversaturated (less than 30%) by monographs and theses of conferences			V
"References" contain no more than 30% of Russian and Ukrainian-language publications			V
Self-citation (works belonging to any of the authors of the article, works published in the journal publishing the article) does not exceed 10% of the check-list			V
Abbreviations of magazine titles correspond to international norms (Journal Title Abbreviations)			V
<b>The article can be published in the journal</b>			V
<b>The article can be published in the journal after appropriate revision by the authors</b>			V
